EXPERIENCE

Software Engineer

Oct 2024 – Present

Microsoft

Vancouver, BC

- Leveraged Copilot Studio to develop API integration for fetching and displaying specific area road closure information, enabling citizens to access precise and up-to-date traffic updates.
- Successfully streamlined data integration architecture from "F&O → Dataverse → Data Lake" to a direct "F&O → Data Lake" connection model, eliminating the middleware layer.
- Implemented "Tables in the Lake" solution that reduced synchronization time by 30%, shortened installation time by 1-1.5 hours, significantly decreased system latency, and enhanced overall data processing performance

Full-Stack Developer Intern

Aug 2023 – Nov 2023

Alibi

Toronto, ON

- Developed specific UI components for the promoter group, including sections like 'My Groups', 'Create Group', and 'Manage Events' tailored for the promoter view
- Designed and implemented hooks for CRUD operations in promoter groups, as well as for uploading image URLs. Ensured atomicity in operations across both promoter group owner's and promoter's views, and seamlessly integrated these hooks with UI components
- Implemented an 'Anonymous User' functionality that permits partial app access without account creation, with an option to elevate the account to a full-fledged user profile at any time
- Expanded Firestore security rules to incorporate additional validation mechanisms for both read and write operations
- Crafted data models to effectively represent promoters, promoter groups, as well as their associated events and related data

Software Development Engineer Intern

Sep 2022 – Mar 2023

Altomni Corp.

Santa Clara, CA

- Design Data model and database schema for tree structure customer journey, which allow the service to save the customer journey into MySQL database, and allow the customer to retrieve and update their customer journey from the database
- Implement logic to create workflow tasks, and call APIs to add tasks to Redis for workflow task scheduling and execution
- Implement APIs to create webhooks for Shopify which allows our app to get notified when customers take specific actions such as abandon checkout and create checkout
- Implement handleEventWebhook method to receive and parse payloads from Spark Post webhook and save or update customer information to MySQL database

PROJECTS

Where's Next | *Node.js, Angular.js, MongoDB*

Sep 2022 – Dec 2022

- Design an algorithm to sort a list of places, taking into account their Google Maps ratings, types, and the user's preferences. Implement a user review feature, where ratings will be updated to a user preference table for future recommendations
- The algorithm will gather necessary data, weight each factor based on user preference, and sort the list with the most relevant and highest-rated places on top

EDUCATION

Bellevue College

Bellevue, WA

Bachelor of Applied Science, Software Development

Sep. 2022 – June 2023

TECHNICAL SKILLS

Languages: Python, Java, C#, SQL, JavaScript, React.js

Frameworks: Node.js, React, ASP.NET, Spring Boot

Database: MySQL, MSSQL, MongoDB, Firestore
